February 6, 2001

Dear Valued Customer:

NovelAire Technologies is pleased to announce that it has received **ARI certification** for its line of energy conservation wheels (ECW). NovelAire's ECWs will carry the stamp certifying that its energy wheels were tested in accordance with ARI standard 1060 and that the stated performance has been confirmed by the test protocol.

To date, NovelAire Technologies is one of a select few that has received the ARI certification for its energy wheel products. For more information regarding the certification program we suggest that you visit the ARI website at [www.ari.org](http://www.ari.org).

We suggest that when writing specifications for energy recovery wheels, that reference should be made to using **ARI certified** energy recovery products only as we believe that the engineering community will adopt this type of language as the standard. We caution the industry to not confuse the term "**ARI certified**" with specification language that states that the energy wheel has been independently tested in accordance with ARI standard 1060. Such "independent tests" were not necessarily conducted by the ARI certification protocol and do not carry the certification stamp. If an energy wheel is certified, it will carry the official **ARI certification** stamp as shown on the bottom of this page.

NovelAire Technologies is particularly proud of this accomplishment since it is also consistent with our mission to provide our customers with the highest quality energy recovery products possible. For more information regarding NovelAire's product line we invite you to visit our website at [www.novelaire.com](http://www.novelaire.com).

Best regards,

Neil A. Stephansson
